DETAILED ACTION

1. Election of claims 94-133 filed on 10/23/06 is acknowledged. Claims 1-93 are withdrawn from consideration. In response to the Applicants' arguments that the inventions of Groups I-XIII are closely related, the examiner would like to indicate that while a combination of pulse sequences recited in claim 94 may be non-obvious over the prior art, each of the pulse sequences recited in other sets of claims should be examined separately and may be obvious over existing prior art. It is an unnecessary burden for the examiner to examine each invention directed to a separate pulse sequence. The restriction is proper and is made FINAL.

Double Patenting

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 94-133 are rejected under 35 U.S.C. 101 as reciting the same invention as claims 1-40 of US 7,141,432.

Two differences in terms: "¹⁵N/¹³C-labeled protein sample" of US 7,141,432 vs. "protein sample" of the instant application, and the expression "phase-sensitive manner" of the instant application do not change the type of the rejection, since all methods recited in the claims of the instant application are performed with ¹⁵N/¹³C-labeled protein samples, which is an inherent feature of the protein sample for performing said method; all pulse sequences recited in US 7,141,432 are performed in a phase-sensitive manner, as can be concluded from the disclosure of the patent.
